

Sub C⁴
B1

2. (Twice Amended) A display device having rendered thereon dynamically changing results of a database query, comprising:

3 a query grid having at least one field and associated data and being stored on a

4 server as raw data, wherein the query grid is transmitted from the server to a remote client

5 through a communications interface in response to a communication from the client to the

6 server; and

7 at least one adjustable interface option displayed on the client display device

8 for adjusting associated data of the at least one associated field in real time using the

9 remote client to process the adjustment.

7. (Once Amended) A method for dynamically adjusting associated data values on a client computer, the method comprising:

- transmitting a plurality of data packets comprising associated data values from a host computer to a remote client computer in response to an initial query by the client computer;
- automatically displaying a control module on a display monitor of the client computer;
- dynamically adjusting the associated data values using the remote client to process the adjustment in response to user interaction with the automatically displayed control module; and
- dynamically displaying the adjusted data values on the client display monitor.
